

THE BIG SPIN LEVEL SYSTEM IS TO ELIMINATE LIPPAGE DURING THE INSTALLATION OF CERAMIC TILES ON BOTH WALLS & FLOORS.

Note: Recommended to improve finishes when working with tiles over 30x30cm. Can be used with traditional spacer crosses to achieve your desired grout width.

1.

2.

3.

4.

INSTRUCTIONS FOR USE:

1. Insert threaded spacer base beneath each exposed edge of tile, make sure there is contact between the spacer and the tile with no mortar in between. Position the spacers to best suit the tile size and layout.
2. Install the next tile tightly against the already positioned threaded spacer base. Slide the tile back and forth or use a rubber mallet to bed the tile into the mortar whilst releasing air trapped below.
3. Place the Big Spin cap on top of the threaded spacer base and spin the cap down to the tile surface. Turn cap as required until all adjacent surfaces are flush.
4. After the mortar is cured, the caps and threaded posts can be removed by kicking, using a rubber mallet or a removal roller in the same direction as the grout joint.
